
ABSTRACT OF THE DISCLOSURE

9/10
An electronic gaming console is illustrated having a console cabinet 10 including a prize display 12, a coin entry slot 13, a payout tray 14 and internally mounted game control processor circuits. A video game is provided for play on the console in which images of spinning reels spin and objects (balls) are dropped through a series of obstacles (pins) and eventually land in one or more of a set of containers. Prizes are paid according to either the state of the reels after spinning or the number of balls which are in each container at the end of the ball drop and/or the manner in which the pins are hit.
